P/T Alkalinity Test

 Rinse and fill 25 mL sample tube (#9198G) to 25 mL mark with water to be tested.

NOTE: For results in grains per gallon (gpg), fill to 14.6 mL mark.

- 2. Add 3 drops R-0638G Phenolphthalein Indicator. Swirl to mix. Sample will turn pink (Fig. 1) if P alkalinity is present—proceed to Step 3. If sample is colorless, proceed to Step 4.
- 3. Add R-0687G Sulfuric Acid .12N dropwise, swirling and counting after each drop, until color just changes from pink to colorless. Record drops as P reading.

- 4. Add 5 drops R-0645 Total Alkalinity Indicator. Swirl to mix. Sample will turn green (Fig. 2).
- Add R-0687G Sulfuric Acid .12N dropwise, swirling and counting after each drop, until color changes from green to red (Fig. 3). Record total drops (Steps 3 & 5) as T reading.
- Multiply P reading by 10. Record as parts per million (ppm) P alkalinity as calcium carbonate (CaCO₃). Multiply T reading by 10. Record as ppm T alkalinity as calcium carbonate.

NOTE: For 14.6 mL sample, record P reading as grains per gallon (gpg) P alkalinity as calcium carbonate (CaCO₃). Record T reading as gpg T alkalinity as calcium carbonate.
